

React Native Development

ESLint Setup With VSCode

Mobile Developer Fast Track

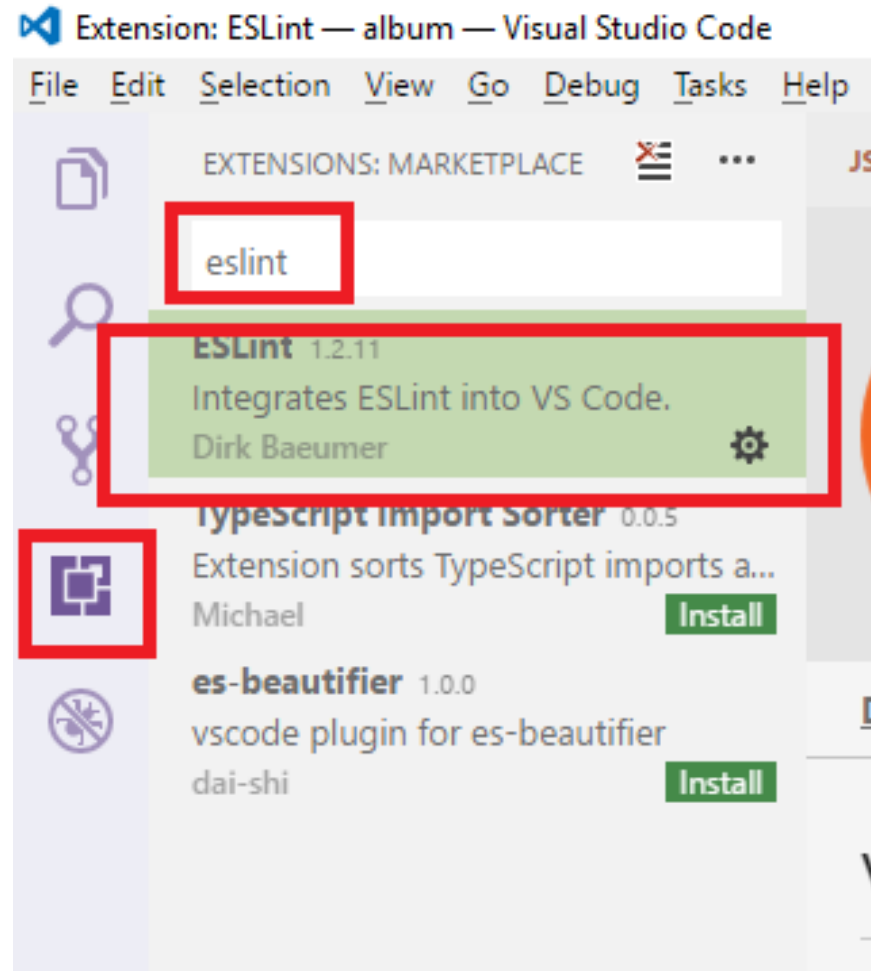

ESLint

- To install ESLint globally, run this script on the command prompt

```
npm install -g eslint
```

ESLint

- To install ESLint in VSCode, click the “Extensions” menu and search for “ESLint”
- Install and enable it

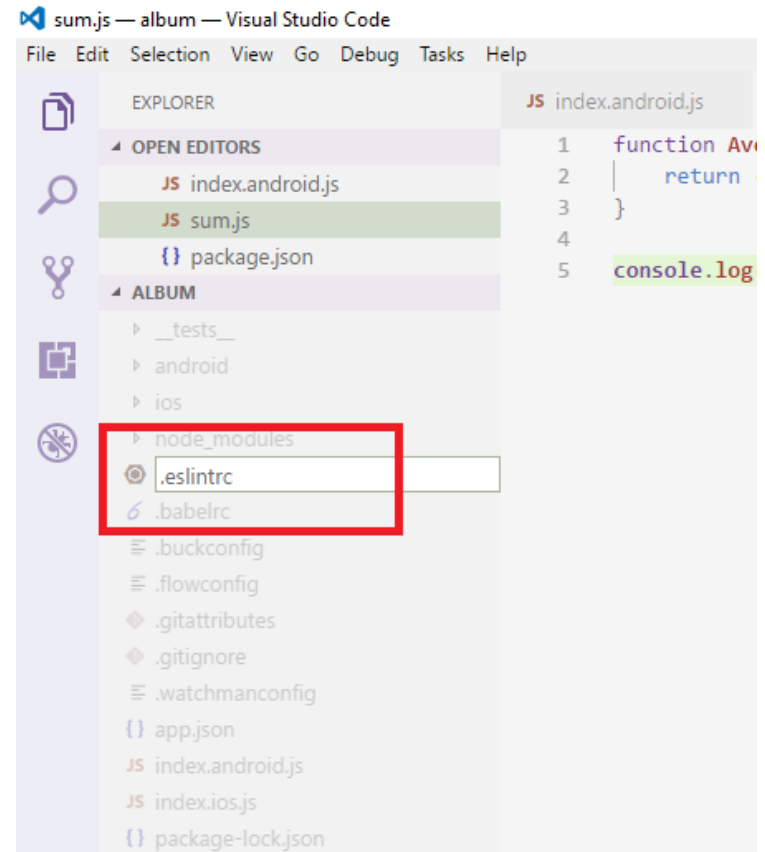

Ruleset

- To install a React Native ruleset for ESLint, run this script on command prompt

```
npm install --save-dev eslint-config-rallycoding
```

Configure Ruleset Into Project

- Open your project in Visual Studio Code
- Create a new file named “.eslinttrc”

.eslintrc

- This file is used to tell ESLint that we want to use the ruleset that we just installed with NPM
- Add this code into the .eslintrc file

```
{  
  "extends": "rallycoding"  
}
```
